## Prerequisites

- Git installed on your machine
- A GitHub account
- Docker Desktop installed
- VS Code installed

1) Assignment

1 a) Task

1. Go to the https://github.com/evl-8/esd-github-actions-assignment repository

2. Fork the repository

3. Got to repository **Settings > Actions > Runners** and click on **New self-hosted-runner**

4. Select **Linux** and scroll down to the **Configure** section.

5. Extract `--url <url>` and `--token <token>`

> 📖 **Example**
>
> ```
> # Create the runner and start the configuration experience
> $ ./config.cmd --url https://github.com/evl-8/github-action-demo --token
> DHE5AGH6AWKB5LQLTETAQE7MX7GQS
> # Run it!
> $ ./run.cmd
>
> Extracts to
>
> Url: https://github.com/evl-8/github-action-demo
> Token: DHE5AGH6AWKB5LQLTETAQE7MX7GQS
> ```
